DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, Claims 1-10, filed on 7/13/05 is acknowledged and upon further consideration by the examiner, the previous Restriction requirement (filed on 6/15/05) has been withdrawn in view of the following Restriction.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, drawn to a process for fabricating a substrate, classified in class 29, subclass 846.
 - II. Claims 11-14, drawn to a substrate, classified in class 174, subclass 255.
3. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process. The product can be made without the steps of forming the mask layers and then removing the same. Further, the

patterns can be made by other known processes in the art such as screen printing or vapor deposition process or stamping a metal plate and gluing the same on the board, instead of electroplating.

4. If applicant elects the invention of Group I, a further Restriction is required:

I-A. Claims 1-6, drawn to a process for fabricating a substrate, classified in class 29, subclass 831;

I-B. Claims 7-10, drawn to an alternative process for fabricating a substrate, classified in class 29, subclass 846.

5. The inventions are distinct, each from the other because of the following reasons:

Inventions I-B and I-A are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the process for fabricating a substrate, as recited in Group I-B, does not require several mask layers such as the second, third and fourth thereof, as required by Group I-A. The subcombination, Invention I-A, has separate utility such as utilizing four seed layers in the process.

Art Unit: 3729

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for each group is not required for other groups, restriction for examination purposes as indicated is proper.

6. A telephone call was not made to Belinda Lee to request an oral election to the above restriction requirement as domestic contact number is not available, thus resulting in an election not being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
